

Cold Chain Packaging

Cold Chain Packaging from Climate Seal™ is the sustainable solution for temperature sensitive cold chain shipments! Our experts work with your specific insulation profile requirements to design a solution that maximizes cold chain effectiveness while minimizing costs and weight.

Made from post-industrial cardboard fibers, our thermal insulation material is 100% curbside recyclable. This means that once your shipment has been delivered, the insulation material can easily be recycled with regular cardboard recycling, something not possible with traditional EPS (expanded polystyrene) insulation.

We understand the importance of preserving temperature sensitive products in shipment, and the many variables that need to be taken into account to ensure safe delivery. Our 100% non-toxic insulation material has a FDA approved Kraft paper facing, making it suitable for use with any food, beverages, or pharmaceuticals.

Whether you are shipping 10 packages a week, or 10,000, we listen to your needs to develop a solution for your unique payload, temperature profile, season, and region that will get your product shipped safely, on-time, and on-budget.
